forearm crutches

made-to-measure

Key features

- Durable nylon cuffs can be adjusted to almost any size
- Custom made for each individual patient to ensure a perfect fit and high comfort
- Strong aluminium construction which supports patients up to 450kg (70st)

Our forearm crutches are custom made to the customer's specification to improve support and comfort for the patient.

The crutches are constructed from aluminium with a black powder coating and have a weight capacity of 450kg (70st).

The durable nylon cuffs can be adjusted to almost any size.

Product codes

BMS001	made-to-measure forearm crutches*

**measurements are crucial, please complete a measurement form when ordering*
