

# Tilt in Space Wheelchair

Heavy duty bariatric wheelchair

The Tilt in Space Wheelchair is designed to meet the specific needs of larger patients with effortless positioning suitable for users up to 180kg.

The wheelchair includes features such as tilt-in-space with weight shifting, two-way backrest and high ergonomic push handle.

Stability in this wheelchair originates from body length compensation in the back and legrests, beneficial for those with limited movement who have difficulty changing position.

### Two-way backrest

The lower and upper parts of the shaped backrest are reversible, giving the option of more space in the seat or chest area.

### Footplate converter

Divided into three parts, the footplate comes with a removable mid section, to facilitate transfers.

### Manual tilt and recline

Controlled manual operation ensures the attendant can easily change seating position.

Pearl Grey

### Frame Colour

Black Dartex TR26
