

slide sheets

patient specific

Key features / spec

Available in 3 sizes (standard, medium or wide)

Extreme low friction surface gives high performance slide

Promotes infection control - sheets are simply thrown away after use

Eliminates the need to lift

Slide sheets have become invaluable for repositioning a patient in bed without the need to lift, significantly reducing the risk of back injuries in staff carrying out patient handling tasks.

With the increasing incidence of MRSA, CDIF, and emphasis on infection control, as well as issues relating to laundering and ownership of slide sheets, our patient specific slide sheets have been developed to provide a solution to these issues.

With the same high performance as our ultra slide sheets but with the price tag to satisfy even the most constrained budget, our patient specific slide sheets are the ideal choice for patient handling tasks with infection control in mind.

Slide sheets are supplied in boxes of 100 and can be used individually or in pairs.
