

walking frame

bariatric walking frame with wheels

Key features

Strong construction which can take the weight of patients up to 318kg (50st)

Extremely lightweight and easy to manoeuvre

Moulded hand grips for added comfort

Height adjustable

The height adjustable bariatric walking frame with wheels allows for smooth user travel. With an extra wide frame top to accommodate larger patients, the frame is equipped with moulded hand grips to provide comfort for the user. The frame features a chromium-plated finish and heavy duty steel construction with non-slip rubber feet.
